Azure in 5 Wochen

Woche 1	(22. – 26. Juni)	Trainer: Thomas Jäkel	Online	Intro, Identity, Governance
Woche 2	(29. – 03. Juli)	Trainer: Thomas Jäkel	HD	Tools, Networking
Woche 3	(06. – 10. Juli)	Trainer: Thomas Jäkel	HD/MA	Storage, Compute 1
Woche 4	(13. – 17. Juli)	Trainer: Jörg Heinlein	Online	Compute 2, Monitoring, Backup
Woche 5	(20. – 24. Juli)	Trainer: Thomas Jäkel	HD/MA	Prüfungsvorbereitung, Prüfung

AZ-104

Learning Paths:

- Manage identities and governance in Azure
- Prerequisites for Azure administrators – CloudShell and templates
- Configure and manage virtual networks for Azure administrators
- Implement and manage storage in Azure
- Deploy and manage Azure compute resources
- Monitor and back up Azure resources

 Implement and manage storage in Azure

Compare Storage for File Shares and Blob Data

Feature	Description	When to use
Azure Files	SMB interface, client libraries, and a REST interface that allows access from anywhere to stored files	• Lift and shift an application to the cloud • Store shared data across multiple virtual machines • Store development and debugging tools that need to be accessed from many virtual machines
Azure Blobs	Client libraries and a REST interface that allows unstructured data (flat namespace) to be stored and accessed at a massive scale in block blobs	• Support streaming and random-access scenarios • Access application data from anywhere

Create File Share Snapshots

- Protection against application error and data corruption
- Protection against accidental deletions or unintended changes
- Support backup and recovery
- Incremental snapshot that captures the share state at a point in time
- Snapshot at the *file share level*, and restore at the *file level*
- Is read-only copy of your data

+ Add snapshot ↻ Refresh 🗑 Delete		
Name	Date created	Initiator
☐ 2020-03-12T00:58:38.0000000Z	3/11/2020, 8:58:38 PM	-

Use Azure Storage Explorer

- Download and install
- Access multiple accounts and subscriptions
- Create, delete, view, edit storage resources
- View and edit Blob, Queue, Table, File, Cosmos DB storage and Data Lake Storage
- Obtain shared access signature (SAS) keys
- Available for Windows, Mac, and Linux

Also consider portal-based Azure Storage Browser and Azure Storage Mover

Configure Storage Security

Review Storage Security Strategies

Storage Service Encryption

Authentication with Entra ID and RBAC

Client-side encryption, HTTPS, and SMB 3.0 for data in transit

Azure disk encryption

Shared Access Signatures – delegated access

Shared Key – encrypted signature string

Anonymous access to containers and blobs

Create Shared Access Signatures

- Provides delegated access to resources
- Grants access to clients without sharing your storage account keys
- The account SAS delegates access to resources in one or more of the storage services
- The service SAS delegates access to a resource in just one of the storage services

The screenshot shows the 'Create Shared Access Signature' form in the Azure portal. Handwritten blue annotations include a cylinder labeled 'Storage Account' and the text 'key 1' and 'key 2'. A blue oval highlights the 'Signing key' dropdown menu, which currently shows 'Key 1'. A red oval highlights the 'Permissions' dropdown menu, which currently shows 'Read'. The 'Start and expiry date/time' section has 'Start' set to '02/01/2021' and 'Expiry' set to '02/02/2021', both with red underlines. The 'Allowed IP addresses' field contains the text 'for example, 168.1.5.65 or 168.1.5.65-168.1....'. The 'Allowed protocols' section has 'HTTPS' selected. A blue button at the bottom reads 'Generate SAS token and URL'.
